

SIVA HARISH S

Backend Engineer | Flutter Developer

sivaharish0202@gmail.com | +91 6382318872 | github.com/sivaHarish02 | linkedin.com/in/sivaharish02 | Coimbatore, Tamil Nadu

PROFESSIONAL SUMMARY

Backend Engineer & Flutter Developer with 2+ years of experience building scalable APIs, mobile applications, payment systems, and real-time platforms. Specialized in Node.js, Flutter, MySQL, Prisma ORM, Firebase, AWS S3, and React. Experienced in solving production engineering challenges involving payment reliability, database migrations, notification systems, and performance optimization.

TECHNICAL SKILLS

Languages & Frameworks: Node.js, Express.js, Flutter, React.js, TypeScript, JavaScript, Dart

Databases: MySQL, MongoDB, Prisma ORM — Query Optimization, Schema Design, Indexing

Mobile: Flutter, Firebase, Firebase Cloud Messaging (FCM), Deep Linking, Android App Links

Cloud & DevOps: VPS Deployment, Linux, Git, GitHub

Integrations: Razorpay, Webhooks, WebRTC Video Calling, Push Notifications, REST APIs, Third-Party APIs

PROFESSIONAL EXPERIENCE

Backend Engineer | Flutter Developer | ELANOXTECH

2024 – Present

- Developed and maintained 150+ production REST APIs supporting mobile and web applications using Node.js and Express.js
- Built cross-platform Flutter mobile applications with Firebase integration, deep linking, and real-time push notifications
- Architected webhook-driven payment processing with Razorpay — eliminated payment-success/order-failure scenarios in production
- Migrated production databases from Latin encoding to UTF8MB4 — enabling full multilingual, special character, and emoji support
- Debugged and optimized WebRTC signaling architecture improving video call reliability across mobile and web platforms
- Built scalable Firebase Cloud Messaging notification system with optimized token lifecycle management improving delivery rates
- Optimized AWS S3 media storage workflows improving media delivery performance and reducing unnecessary storage operations
- Deployed and maintained production applications on Linux VPS; diagnosed and resolved critical production incidents

KEY ENGINEERING ACHIEVEMENTS

- Payment Reliability: Architected backend webhook-verified order processing — fault-tolerant even if app closes or network drops during payment
- UTF8MB4 Migration: Led production database encoding migration preserving 100% data integrity with zero downtime
- Video Calling: Resolved WebRTC signaling failures improving cross-platform communication stability and reliability
- Push Notifications: Designed FCM architecture with proper token management — measurably improved notification delivery rates
- Deep Linking: Implemented Android App Links enabling seamless navigation between shared content, app, and web

KEY PROJECTS

Virtual 2 Live Platform — Flutter · Node.js · MySQL · Firebase · WebRTC

- Real-time video calling, chat system, push notifications, deep linking, and event management across mobile and web

Ovantica Platform — Node.js · MySQL · Razorpay

- Implemented webhook-driven payment processing and fault-tolerant order creation workflows — eliminated payment-success/order-failure scenarios

Nanjil Mart — E-Commerce Platform — Flutter · Node.js · Prisma ORM · MySQL · Razorpay

- Full e-commerce: product/category/stock management, order processing, Razorpay payment integration, and admin panel

CRM Lead Management System — React.js · Node.js · MySQL

- IndiaMART lead integration, employee management, customer tracking, reminder system, and dashboard analytics

EDUCATION

Master of Computer Applications (MCA)

2022 – 2024

RVS College of Arts and Science, Coimbatore
